Food waste

The average UK family throws away about 24 meals a month. This means they are throwing away about 4.2 million tonnes of food and drink a year. Almost half of this food goes straight from fridges or cupboards into the bin. A recent study showed that about 60% of this waste could be eaten. The top three foods that end up in the bin are bread, potatoes and milk. So, what can we do about this? Ordinary families can plan their meals better. Writing a list of meals for the week can help. That way people only buy what they need.

However, it isn't only families that waste food. It is shops and food places, too. As a result, the UK government has started a campaign. They have asked producers, supermarkets and restaurants to work together to reduce food waste. Some supermarkets and restaurants are now giving food they don't sell to charities. They are also thinking more carefully about the amount of food they keep in their shops and kitchens. Ordering too much results in waste.

There are other things that can be done to solve this problem. Wasting food and burying it in the ground increases the amount of greenhouse gases in the atmosphere and therefore global warming. This is why some local councils are using food waste from homes and businesses to produce energy. If we act now, we can protect the planet and save billions of pounds.

Read the text. Choose the correct words to complete the short summary.

The article is about food waste **in one country / around the world**. The writer is most likely a **chef / journalist**.

/ 2

Read the text again. Are the statements true (*T*) or false (*F*)?

1 Every year, people in the UK throw away about 4.2 million tonnes of food and drink. _____
2 People often throw away their food before they even open it. _____
3 People in the UK rarely throw away milk, potatoes and bread. _____
4 The UK government has begun to work with the food industry. _____
