

DANGER ZONE: THE CRITICAL RISKS OF AC INSTALLATION

CRITICAL INTERNAL HAZARDS

1)

Occurs when power isn't shut off or grounding is improper.

3)

Caused by handling pressurized refrigerants without protective equipment.

2)

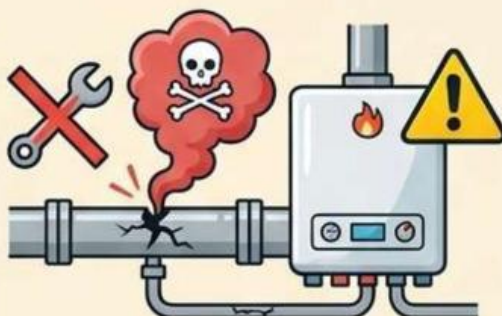

Occurs when working on roofs or unstable platforms without fall protection.

4)

Sharp metal edges and brazing require safety gloves and eye protection.

5)

Results from improper gas line connections or venting errors.

6)

Placing units near flammable materials or failing to secure them properly.
