

Exercise 1 : Listening and Reading.

A Healthier Digital Life

Last semester, Mia and her classmates had a big science project to complete. They wanted to create a presentation about renewable energy, but they were struggling to organize their ideas. Mia suggested using an artificial intelligence tool to help them research the topic. However, their teacher reminded them that technology should support learning, not replace their own thinking.

For several weeks, the students had been collecting information from books and reliable websites before they decided how to organize their presentation. They divided the work according to their strengths. Mia designed the slides, Leo checked the scientific facts, and Sara prepared the speech. They also used a shared online document to exchange ideas and correct mistakes.

By the time they presented their project, they had been practicing their speech for several days. At first, some students felt nervous because they were afraid of making mistakes in front of their classmates. Instead of giving up, they practiced together after school and gave each other helpful feedback. Their confidence gradually improved.

Today, Mia has been using digital tools more carefully. She checks information before accepting it and never copies an answer without understanding it. Her team received a very good grade, but Mia believes their greatest achievement was learning to cooperate. She has realized that technology is most useful when students combine it with curiosity, critical thinking, and teamwork.

Exercise 2 : Reading Comprehension.

Instructions: Answer each question in complete English sentences using information from the reading.

1. 1. What was Mia's science project about?
 - A) Renewable energy. B) Online video games. C) Social media safety.
2. Why did the teacher remind the students to use technology carefully?
 - A) Because technology should replace all classroom activities.
 - B) Because technology should support learning rather than replace their thinking.
 - C) Because students were not allowed to use books.
3. What had the students been doing before they organized their presentation?
 - A) Collecting information from books and reliable websites.
 - B) Practicing a musical performance.
 - C) Designing a new computer game.
4. How did the students improve their confidence before the presentation?
 - A) They asked another class to do the project for them.
 - B) They stopped practicing when they felt nervous.
 - C) They practiced together and gave each other feedback.
5. According to Mia, when is technology most useful?
 - A) When students copy information quickly.
 - B) When students combine technology with curiosity, critical thinking, and teamwork.
 - C) When students work without communicating with anyone.
6. What problem did Mia and her classmates have at the beginning of the project?
 -
7. How did the students divide their responsibilities?
 -
8. Why were some students nervous before the presentation?
 -
