

What is Science?

Doctors and scientists help sick people. They study illnesses and make new medicines.

There is science when we cook. Hot water becomes steam. Food in the fridge gets cold.

Science is everywhere! We use science everyday.

Sometimes experiments don't work. Scientist try and learn from mistakes.

Science starts with a question.

Plants need sunlight, water and air to grow.

Science helps to understand the world.

Scientist look, think and do experiments.

Scientist make cars, computers, buildings and machines.

Animals need food, water and a safe place to live.
