3 Read the text about **bristle worms**. Look back at the two texts about glowing animals in your Coursebook. Complete the table with facts about the glowing animals.

Bristle Worms

If you want to make friends, you need to know how to shine. Bristle worms do just that. They get their name from their many bristles, or hair-like body parts that look like small legs. There are more than 10,000 different types of bristle worms in the oceans. They live in many ocean environments, from open water to the deep sea. Bristle worms have existed for a very long time, over 500 million years. Many bristle worms glow. They often swim near the surface of the water and begin to glow at certain times. Not all of them glow in the same way. Some may shine with a green light, while others might produce short flashes. For bristle worms, this light display helps them communicate with each other.

	Where it lives	General information	How it uses light
Vampire Squid			
Anglerfish			
Bristle Worm			

WRITING

4 21c Work in pairs. Use the notes in Activity 3 in the Coursebook to write an **encyclopedia entry** about the Viper Fish and the Big Fin Reef Squid. Use the following guidelines:

- Think about what the animals use their light for.
- Write complete sentences.
- Use the encyclopedia entries to help you.
- Add your own ideas to your sentences.
