**Read and write *T* for True or *F* for False.**

**Singing Sands**

There are many unusual deserts and beaches in the world called "singing sands" because when you visit them, you often hear strange music. Scientists say that the sound is natural and might be made by the wind blowing over the sand, or by the sand when it moves downhill.

In 2012, some researchers from France went to the deserts in Morocco and Oman and brought boxes full of sand back to their laboratory in Paris. They wanted to solve the mystery of why the sand "sings". They made hills of the different types of sand and then moved the sand around. As the grains (small pieces) of sand mixed, the researchers heard a sound. The sound changed when large grains of sand crashed against smaller grains. The researchers think that perhaps when the different sounds come together, they make "music". However, they are not sure what the reason is for the singing sands.

17. Scientists have thought that wind blowing on beaches might cause you to hear strange "music". _____

18. Scientists believe that the "music" of the singing sands might happen when the sand moves uphill. _____

19. Researchers went to Oman and Morocco in 2015 to study the singing sands. _____

20. Researchers took sand from Morocco and Oman. _____

21. The researchers were from France. _____

22. The researchers put some of the sand in boxes and brought it to their laboratory. _____

**Listen and choose the correct answer. TR: 11**

23. Fiona is from _____

a. France b. the UK

24. Fiona was going to a _____ in Paris.

a. soccer game b. stage play

25. Fiona didn't trust the boat because _____.
