LISTENING - Instructions:

Listen carefully then follow the provided instructions.

1 - Choose the correct option. (1 point)

a) been
b) being
c) be

2 - Choose the correct option. (1 point)

a) reviewin
b) reviewed
c) reviewing

3 - Choose the correct option. (1 point)

a) atending
b) attending
c) atendyng

4 - Choose the correct option. (1 point)

a) tomorrow
b) two more oh
c) tumor

5 - Choose the correct option. (1 point)

a) assuming
b) amusing
c) using

_____// 5

READING - Instructions:
Read the next text and answer the questions.

Exercise I.

Sci-fi meets science

The film Minority Report, based on a novella by science fiction author Philip K Dick, was released in 2002 and set in the year 2054.

Three years before production began, director Steven Spielberg invited fifteen experts, including the founder of virtual reality Jaron Lanier, to a three-day summit to reflect on which technologies could possibly exist in the 2050s.

The discussions shaped many of the innovations featured in the film.

If the events of the Tom Cruise-starring science fiction thriller are to be believed, by the mid-2050s we will all be using gesture recognition (and fancy gloves) to swirl through videos on our transparent monitors, while policemen on jetpacks fight impending crime with the help of vomit-inducing batons.

Like much science fiction in the arts, the film paints a dystopian view of our future years.

It's a feeling which some experts have begun to echo in our current timeline - with some going even as far as to suggest that artificial intelligence could lead to the extinction of humanity.

Perhaps before getting too despondent about what may await us in 2050, it's worth returning to the words of Philip K Dick himself.

"I, for one, bet on science as helping us," he wrote in his 1968 personal autobiographical essay Self Portrait.

"Science has given us more lives than it has taken," he said.

"We must remember that."
