

The needs of a plant.

- Helps the plants to stay upright.
- Helps to make their own food through the photosynthesis.
- Helps to transport nutrients around the plant.

- Leaves turn it into food for the whole plant.

- Plants "breathe in" carbon dioxide and "breathe out" oxygen in the respiration process.

- Is a major source of nutrients needed by plants for growth.
- Roots absorb the nutrients.

- Plants can spread out and absorb water and nutrients.
- The leaves need it to access light.
