

Every scientist dreams to something and gain world
 , but this way is not as easy as it seems. As a rule,
 everything starts in childhood when a child appears to have an
 for physics or chemistry. Soon an adult sees the child's
 great and helps him develop it. The child studies hard
 having to different sources of information. Doing different
 projects, the gifted child grows in to a big-head student who receives
 a His teachers him with being the
 Noble prize very soon. This student a new term in science
 and gives a lot of lectures to make the science society
 his achievements and win the Step by step, this student
 is becoming a great In his sphere and making a great
 science development. The streets and schools are
 after him. New generations of scientists make
 to his works and hope to follow his way.

1. write down the branches of science:

1. It explores the space and solar systems, galaxies and stars.

2. it conducts experiments using acids, bases and other substances.

3. it observes the structure of Earth predicting earthquakes or relief changes

4. it calculates the velocity, gravity and power, relativity, explaining the life on
 the Earth.....

5. it digs and analyses artifacts formulating various hypotheses of our
 past.....

6. This science is the most accurate and is considered to be the queen of
 science.....

7. it learns stems, roots, leaves and buds, flower etc.
