

DIVERSIDAD DE LAS REGIONES NATURALES DEL ECUADOR

- Arrastra la flora y fauna a su región natural respectiva:

A map of Ecuador is shown, divided into several regions. Each region is outlined with a yellow border and contains an empty square box for dragging an element. The map is color-coded: the northernmost region is light green, the central region is medium green, and the southern region is dark green. To the right of the map is a grid of 30 small images, each in a yellow-bordered box. These images represent various natural elements of Ecuador, including plants, animals, and fruits. The elements are arranged in a grid that is roughly 10 columns wide and 3 rows high, with some elements missing in the bottom row.
