READING

Leonardo Da Vinci

Leonardo Da Vinci was one of the great creative minds of the Italian Renaissance, hugely influential as an artist and sculptor but also immensely talented as an engineer, scientist and inventor.

Leonardo da Vinci was born on 15 April 1452 in Vinci. He was apprenticed to the sculptor and painter Andrea del Verrocchio in Florence. In about 1483, he moved to Milan to work for the ruling Sforza family as an engineer, sculptor, painter and architect. Then, he produced the famous Madonna on the Rocks and The Last Supper which has been described as one of the greatest spiritual paintings. Unfortunately, over the time the quality of the original painting has deteriorated despite frequent restoration attempts.

During his time in Florence, he painted several portraits, but the only one that survives is the famous 'Mona Lisa'. For several days she (the Mona Lisa) came to Leonardo and sat for her portrait to be painted. However, she refused to smile. Leonardo even tried hiring musicians but to no avail. One day she gave a faint smile and Leonardo was able to capture it. In 1517 Leonardo moved to the Château of Cloux, near Amboise in France, where he died on 2 May 1519.

The fame of Da Vinci's surviving paintings has meant that he has been regarded primarily as an artist, but the thousands of surviving pages of his notebooks reveal the most eclectic and brilliant

of minds. He wrote in left-handed mirror script and drew on subjects including geology, anatomy (which he studied in order to paint the human form more accurately), flight, gravity and optics.

Da Vinci's place as a pioneering scientist is beyond dispute. Yet his true genius was not as a scientist or an artist, but as a combination of the two: an 'artist-engineer'.
