DROIDS at Work

When we think of droids, one film series comes to mind – George Lucas' *Star Wars*! Let's take a close look at what these robots can do.

C-3PO, or Threepio to his friends, is a protocol droid. This type of droid tells others how they should behave when they meet aliens from different planets. Threepio can also speak over 7 million different languages. People sometimes get angry with him because he talks a lot. It's not his fault, though – they programmed him that way!

R2-D2 is C-3PO's best friend. R2-D2 is an astromech droid. He works on spaceships as a mechanic. He mostly repairs things, but he is also able to cut things with a saw, project holograms and put out fires. He sometimes flies with pilots when they go on dangerous missions. He's small, but he's really brave.

BB-8 and R2-D2 are very similar. Both of them are brave astromech droids. BB-8 looks a bit different, though, because he is round. He can do the same things that R2 can, but his shape means he can roll around quickly. This is very useful for BB-8 because he often needs to get out of trouble fast!
