

## Algebra

### Writing algebraic expressions

Place the correct algebraic expressions with the correct verbal phrases below :

$4x - 3$

$x - 6$

$7y$

$x + 5$

$3x + 4$

$X - 8 = 15$

$\frac{x}{6}$

$2x - 5$

$\frac{x}{18} = 6$

$6x + 7$

| Verbal phrases                                    | Algebraic expressions |
|---|-----------------------|
| 1.  |                       |
| A number less than 6                              |                       |
| 2.<br>X greater than 5                            |                       |
| 3. 7 times y                                      |                       |
| 4. Divide x by 6                                  |                       |
| 5. four plus three times a number                 |                       |
| 6. three less than four times a number            |                       |
| 7. The difference between x and 8 is 15           |                       |
| 8. The quotient of 18 and x is 6                  |                       |
| 9. Seven is greater than a number multiply by six |                       |
| 10. Five less than twice a number                 |                       |
