

# ANGOLI SUPPLEMENTARI bis

di Anna Nuovo

Due ANGOLI sono **SUPPLEMENTARI** se la loro somma è un **ANGOLO PIATTO**

SE  $\alpha = 45^\circ$   
 $\beta = 180^\circ - 45^\circ = 135^\circ$

Determina l'ampiezza dell'angolo supplementare a quello dato:

$$\alpha = 100^\circ$$

$$\beta = 180^\circ - \quad {}^\circ = \quad {}^\circ$$

$$\alpha = 30^\circ$$

$$\beta = \quad {}^\circ - \quad {}^\circ = \quad {}^\circ$$

$$\alpha = 90^\circ$$

$$\beta = \quad {}^\circ - \quad {}^\circ = \quad {}^\circ$$
