

You can find volume even when some of the unit cubes are missing

How many blocks on the bottom layer?

How many blocks stacked high?

Multiply the values together

$$\boxed{8} \times \boxed{6} = \boxed{48}$$

How many blocks on the bottom layer?

How many blocks stacked high?

Multiply the values together

$$\boxed{} \times \boxed{} = \boxed{}$$

How many blocks on the bottom layer?

How many blocks stacked high?

Multiply the values together

$$\boxed{} \times \boxed{} = \boxed{}$$

How many blocks on the bottom layer?

How many blocks stacked high?

Multiply the values together

$$\boxed{} \times \boxed{} = \boxed{}$$

How many blocks on the bottom layer?

How many blocks stacked high?
