

Do you still remember what **half** is?

**Half** is one of two **equal (same)** parts of something. Let's learn 😊

**Upin** has 6 ice-cream cones.

He wants to share **half** of his ice-cream cones with his brother, **Ipin**.

**Upin** and his brother must get **equal** number of ice-cream cones.

Let's find **half** of 6

**Half** of 6 is 3

**Upin** and **Ipin** have the **equal** number of ice-cream cones.

Now, **Upin** has 3 and **Ipin** has 3 ice-cream cones too. They are happy 😊

Let's practise to find halves of numbers. Type to write the missing numbers.

1) Find half of 4.

**Half of 4 is**

2) Find half of 8.

**Half of 8 is**

3) Find half of 10.

**Half of 10 is**

What do you notice when you find halves of 4, 8 and 10?

When we double the half of each number, it becomes the whole number.

**HALF** of 4 is 2 -----> and **DOUBLE** 2 is 4
