## Common Denominators

## Example:

$$\frac{1}{2}$$
 and  $\frac{2}{3}$  ~~~> ?

Smallest number divisible by both 2 and 3, is 6.

So, 6 is the common denominator.

$$\frac{1}{2} = \frac{1 \times 3}{2 \times 3} = \frac{3}{6}$$
  $\frac{2}{3} = \frac{2 \times 2}{3 \times 2} = \frac{4}{6}$ 

$$\frac{2}{3} = \frac{2 \times 2}{3 \times 2} = \frac{4}{6}$$

So, 
$$\frac{1}{2}$$
 and  $\frac{2}{3}$  --->  $\frac{3}{6}$  and  $\frac{4}{6}$ 

Do all the calculations on paper, write here only the answer.

$$\frac{2}{3}$$
 and  $\frac{7}{12}$  ~~~> — and —
