

TRANSNATIONAL TEAMS FOR THE FINAL PRODUCT

REPTILES

(Fifth Team : TheoPoula ORFANIDOU – Nurcanm DEMİRCİ)

Reptiles are a grand brand vertabrates and they reproduce by laying eggs. The smallest reptile in the world is the Brookesia micra chameleon and it lives in Madagascar. Reptiles breathe air using lungs. Lizards, snakes, turtles, crocodiles and alligators are reptiles. Their hearts are generally three-eyed. Their skin is rough and slithery. Reptiles lives in every continent except Antartica. Some reptiles eat other animals and some eat plants.

- 1- Reptiles have their babies in eggs.
- 2- Turtles are one of the reptile species.
- 3- They live in every continent.
