

Name: _____

I can explain the concept of angle measurement.

Directions: what will the measurement of the angle be in degrees and fraction?

1. Look at the angle below. If the top ray in the angle has made 135 turns, then what fraction represents the angle? Name the angle.

°(degrees)
as a fraction

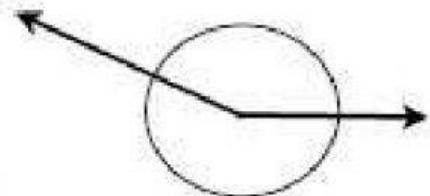

2. Look at the angle below. If the top ray in the angle has made 75 turns, then what fraction represents the angle? Name the angle.

°(degrees)
as a fraction

3. In the angle below, the top ray has made 155 turns. What is the measure of the angle? Write the angle measurement in degrees and fraction form. Name the angle.

°(degrees)
as a fraction

4. If a clock rotates one degree for every second, what will its angle measurement be after one and a half minutes?

°(degrees)

as a fraction
