10. Tired

- 4 Lee el texto, observa las imágenes y une cada una con la palabra que corresponda para completar la oración (1 Punto cada una)

WHAT IS A VIRUS?

A virus is a type of germ. It can make us sick. When you have a fever, a runny nose and a cough, it's a germ that is making you sick. A virus is so tiny we can't even see it. Scientists can see them in a microscope. Viruses look different from one another.

WHAT IS CORONAVIRUS?

The coronavirus is a new kind of virus. This virus looks like it's wearing a spiky crown. Corona in Latin means 'crown' and that's how this virus got its name: coronavirus. Some symptoms of coronavirus are a fever, cough and shortness of breath.

HOW DOES THE VIRUS MAKES ME SICK?

Viruses make people sick by stopping the human cells from working properly. Your body has an army that fights the virus, though. This is called your immune system. When you get a fever and a cough that means your immune system is fighting against the virus. Rest and drink lots of water; you'll get better soon!

_____ can see them
in a microscope.

A virus is so _____
we can't even see it.

This is called your _____

spiky crown

germ

sick

immune system

Scientist

Tiny

THE VIRUS IS A
TYPE OF _____

IT CAN MAKE US _____

This virus looks like
it's wearing a _____.
