

Do with me-see video

Alex needs the total price for 3 items. None of these items are to be taxed

Input	Processing	Output
Price1 Price 2 Price 3	TotalPrice= Price1+ Price2+ Price3	TotalPrice

Do on your own

- Alex needs the total price for 3 items. None of these items are to be taxed

Price1	Price2	Price3	Total_Price
Price1	Price2	Price3	Total_Price

Input	Processing	Output
	= +	

2. Marketing solutions Ltd needs to total sales for January. They receive weekly totals from their 4 branches. Create an IPO cart

Input	Processing	Output
	=	
	+	
	+	
	+	

3. Mr Chin is giving a \$20 DISCOUNT on all sales for this month. Each customer can only buy 4 items to get the discount.

Input	Processing	Output

Please note:

The \$20 in this example is a constant. You could tell your program that Discount is equal to \$20 and use the word Discount instead of the number 20. We will do it this way in future classes
