

Name

2.9 Topographic and Geologic Maps

1. What is a contour line? What is a contour interval?
2. What will a hill look like on a topographic map? How will a basin look different from a hill?
3. How do contour lines indicate a steep slope? How do they indicate a stream?

4. Why might a geologic map be useful to geologists?

1. What is sea level?

2. How far apart are topographic lines?

3. What do the contour lines represent?

4. How do you know that there's a crater at the top of the volcano rather than a peak?

5. What is the purpose of a topographic map?
