

Regla:

1. Separa los dígitos de dos en dos, del radicando
2. Busca un número que multiplicado por sí mismo se acerque a tu primer dígito.
3. Luego se restan.
4. Baja los otros dos dígitos y se separa con una coma la última cifra.
5. Se dobla la raíz y se divide entre las cifras separadas.
6. Se multiplica el cociente obtenido con el siguiente reglón y se resta.

Raíz cuadrada aproximada

Instrucciones:

Calcule la raíz cuadrada aproximadas con tres dígitos de las siguientes operaciones.

Diagram illustrating the steps for finding the square root of 537:

Initial setup: $\sqrt{5,37}$

Step 1: Find a number whose square is close to 5. $2 \times 2 = 4$.

Step 2: Subtract 4 from 5, leaving a remainder of 1. Bring down the next two digits (37) to form 137.

Step 3: Double the current root (2) to get 4. Find a number that, when multiplied by 43, is close to 137. $3 \times 43 = 129$.

Step 4: Subtract 129 from 137, leaving a remainder of 8. Bring down the next two digits (00) to form 008.

Step 5: The final result is 23, with a remainder of 8. The calculation is shown as $23 \times 23 = 529 + 8 = 537$.
