

WORD PROBLEMS WITH EQUATIONS - 1ºESO

1.- The triple of a number decreased seven units is equal to eleven. What is that number?

CHOOSE THE CORRECT OPTION:

EQUATION		SOLUTION	
$3x + 7 = 11$	$3x - 7 = 11$	$x = -17$	$x = 4$
$3x + 7 = -11$	$3x - 7 = -11$	$x = -4$	$x = 6$

2.- The double of a number increased ten units is equal to four. What is that number?

CHOOSE THE CORRECT OPTION:

EQUATION		SOLUTION	
$2x + 10 = -4$	$x/2 + 10 = 4$	$x = -3$	$x = -7$
$2x - 10 = 4$	$2x + 10 = 4$	$x = 7$	$x = -12$

3.- A number and its next number add up 97. What are these numbers?

CHOOSE THE CORRECT OPTION:

EQUATION		SOLUTION	
$x + x = 97$	$2x = 97$	34 and 35	48 and 49
$x - (x + 1) = 97$	$x + (x + 1) = 97$	87 and 88	54 and 55

4.- The quarter of a number decreased five units is equal to seven. What is that number?

CHOOSE THE CORRECT OPTION:

EQUATION		SOLUTION	
$4x - 5 = 7$	$4x + 5 = 7$	$x = 2/4$	$x = 8$
$x/4 - 5 = 7$	$x/4 + 5 = 7$	$x = 48$	$x = 36$

5.- The triple of a number increased six units is equal to five times of this number decreased ten units. What is that number?

CHOOSE THE CORRECT OPTION:

EQUATION		SOLUTION	
$3x - 6 = 5x - 10$	$3x - 6 = x/5 - 10$	$x = 12$	$x = 8$
$3x + 6 = x/5 - 10$	$3x + 6 = 5x - 10$	$x = 2$	$x = 15$
