

#Student Name :

#Import Tkinter Library

#Create a window titled Simple Calculator

#Creat 2 entry Textboxes

#Define function to add 2 values and output to a lable

#Creat a button when clicked call the addition filter

```
window=Tk()
window.title("Simple Calculator")
window.geometry("400x300")
```

```
def Addition():
    answer=float(ent1.get())+float(ent2.get())
    answer=str(answer)
    lbl=Label(window,text=answer)
    lbl.grid(row=6,column=0)
```

```
btn1=Button(window,text="+",command=Addition)
btn1.grid(row=5,column=0)
window.mainloop()
```

```
ent1=Entry(window)
ent1.grid(row=1,column=0)
ent2=Entry(window)
ent2.grid(row=3,column=0)
```

```
from tkinter import *
```
