Facts about the faction industry:

The fashion industry produces % of all humanity's carbon emissions and is the - largest consumer of the world's water supply.

It takes about gallons of water to produce one cotton shirt. That's enough water for one person to drink at least eight cups per day for three-and-a-half years.

It takes about gallons of water to produce a pair of jeans. That's more than enough for one person to drink eight cups per day for 10 years.

In Europe, fashion companies went from an average offering of two collections per year in 2000 to five in 2011. Some brands offer even more. Zara puts out collections per year, while H&M offers between 12 and 16.

% of all textiles go to the dump each year. The equivalent of one garbage truck full of clothes is burned or dumped in a landfill every .

Washing clothes, meanwhile, releases 500,000 tons of microfibers into the ocean each year — the equivalent of 50 plastic bottles.
