Why People Work

Why do we work? We work because we have to make a living. Sure, but is that it? Of course, not. When you see people who are fulfilled by their work why they do the work they do, money almost never comes up. The list of non-monetary reasons people give for doing their work is long and compelling.

Satisfied workers are engaged by their work. They lose themselves in it, not all the time, of course, but often enough for that to be salient to them. Satisfied workers are challenged by their work. It forces them to stretch themselves - to go outside their comfort zones.

Why else do people work? Satisfied people do their work because they feel that they are in charge. Their workday offers them a measure of autonomy and discretion. And they use that autonomy and discretion to achieve a level of mystery or expertise. They learn new things, developing both as workers and as people.

These people do their work because it's an opportunity for social engagement. They do many of their tasks as part of teams, and even when they're working alone, there are plenty of opportunities for social interaction during work's quiet moments.

Finally, these people are satisfied with their work because they find what they do meaningful. Potentially, their work makes a difference to the world. It makes other people's lives better. And it may even make other people's lives better in ways that are significant.

The javan tiger (*Panthera tigris sondaica*) is a subspecies of tiger that lived uniquely on the island of Java, in Indonesia. It became extinct at the beginning of the 1980s, mainly due to deforestation, hunting, and the loss of its prey.

At the beginning of the 20th century, as the human population on Java increased, so did related human activity and agricultural land use. Hunted and killed by local populations, the javan tiger also suffered the destruction of its habitat through the expansion of ricefields, teak forests, and coffee and hevea plantations. These crops invaded the Indonesian island and replaced natural spaces, forcing all fauna to survive in ever-shrinking areas, poor in biodiversity.

The scarcity of its two favourite prey: javan rusa deer (*Rusa timorensis*) and wild boar (*Sus scrofa*), and modification of its habitat forced the tiger to look for new sources of nutrition. Monkeys become the feline's main prey. Sadly, in order to feed, it entered into competition with another big cat, much more adapted to primate-hunting (which are arboreal): the javan leopard (*Panthera pardus melas*). Thus, the last known specimen of javan tiger was seen in 1976. In the absence of its natural habitat and available prey, the subspecies disappeared.

A social movement has one or more core organizations in a penumbra of people who engage in spontaneous supportive behavior that the core organizations can often mobilize but less often control. When there is spontaneous behavior with only embryonic organization, there may be a premovement phenomenon awaiting the right conditions to become a movement, but there is no movement per se. When the penumbra of spontaneous behavior has contracted to no more than the core organizations, or has not yet developed, there is also no movement. An organization that can mobilize only its own members, and whose members mobilize only when urged to action by their organization, is lacking a key characteristic of movements. Regardless of whether structure or spontaneity comes first, or if they appear simultaneously, the important point is that both must exist.

In addition to structure and spontaneity other important elements shape the form and content of a social movement. Whether all are necessary to make a movement is open to debate. But they are so prevalent that they cannot be overlooked.

Taken from: Waves of Protest: Social Movements Since the Sixties

24. The text is mostly about
- A. how social movement is formed
 B. why we should have social movement
 C. the dangers of social movement
 D. why people join social movement
 E. how people build an organization
25. "Regardless of whether structure or spontaneity comes first, or if they appear simultaneously, the important point is that both must exist."
 The underlined word refers to
- A. the organization and the members
 B. the characteristics and the movement
 C. the structure and the spontaneity
 D. spontaneous behavior and premovement phenomenon
 E. structure or spontaneity comes first and they appear simultaneously
26. "But they are so prevalent that they cannot be overlooked."

Bukittinggi, October 15, 2018

Dear Sandy,

It's been too long since our last visit, and I thought I'd write to you to see how everything is. How are you and your family doing? Is your little sister more beautiful now? I remember that she was four years old when I met her.

I'm seventeen years old now, and I am more mature. If you see me, you will be surprised because I become a fat man now. I think you will say that I'm uglier than before. Well, it's because I always feel hungry.

I miss your mother's cooking. I hope I can visit you and your family next holiday. Or, you will visit me when you come to my town someday.

Keep me posted whenever you can. Send my regards to your family.

Your buddy,

David
