Seismic movements and earthquakes

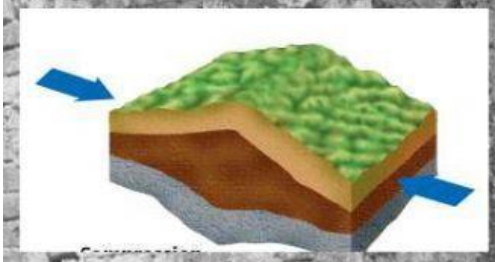

According to the information seen in the microclass, complete the next activities

Which can be the proper definition of an eartquake?

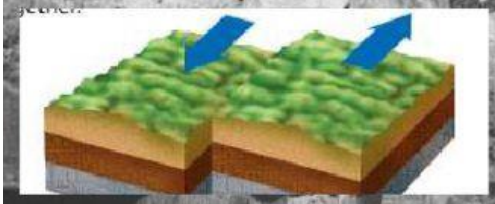

What does "tectonic plate" mean"?

Simplifying too much, what cuases an earthquake?

Drag the correct option, description or name to make them match with a seismic movement

Shearing movement

Compression movement

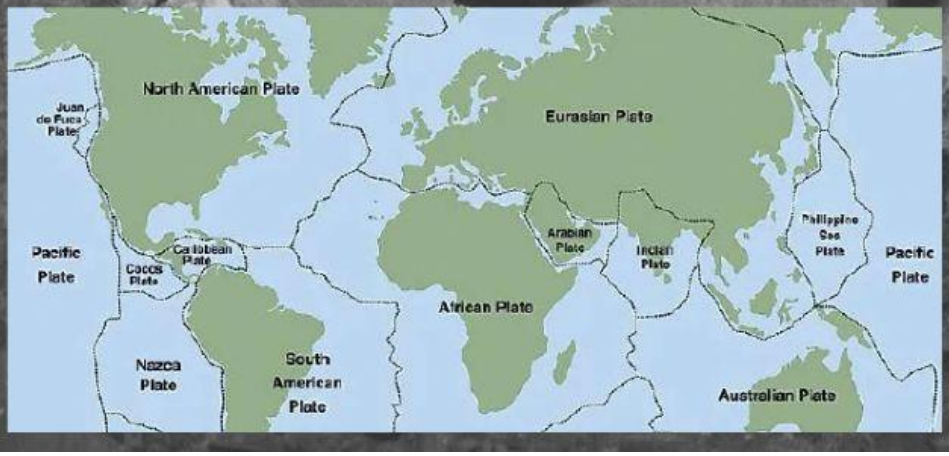

Two tectonic plates separate from each other.

Two tectonic plates go in different directions and produce friction.

Tension movement

Two tectonic plates collide with each other.

Finally, select the country that was used as an example of tension movement during the class (the news was about that country)
