PREMID TERM REVISION WORKSHEET 4

CHAPTER – HEAT

Multiple choice questions

1. When two objects are in thermal contact, how is the heat from one body to the body transferred?

- a. Conduction.
- b. Convection.
- c. Radiation.
- d. Expansion.

2.. Why are tea cups never made of metals?

- a. Metals are shiny.
- b. Metals are expensive.
- c. Metals are good conductors of heat.
- d. Metals have high melting point.

3. Rooms are fitted with ventilators to let hot air out. What is the phenomenon involved in this?

- a. Conduction.
- b. Convection.
- c. Radiation.
- d. Expansion.

4. Why do solar panels have black surfaces?

- a. They are good absorbers of heat.
- b. They are bad absorbers of heat.
- c. They are good reflectors of heat.
- d. They are bad radiators of heat.

5. X is the mode of transmission of heat that takes place by the movement of hot particles. Identify X.

- a. Conduction.
- b. Convection.

- c. Radiation.
- d. Expansion.

Fill in the blanks based MCQ

6. We receive heat energy from the sun through _____ mode of transmission.

- a) conduction.
- b) convection.
- c) radiation.
- d) insulation.

7. The movement of cold air from sea towards land during the daytime is called_____.

- a. Air breeze
- b. Sea breeze
- c. Land breeze
- d. None of these.

Case study based MCQ

Paheli took an iron rod. Fixed a few small wax pieces at equal distances on the rod as shown in the figure. She clamped the rod to a stand. Heated the other end of the rod and observed.

8) Which one of the paper pins will fall off the metal rod first?
P Q R S

9) What does this experiment illustrate?

- a) wax melts easily.
- b) candle flame conducts heat.
- c) Iron is a bad conductor of heat.
- d) Heat gets transferred from hot part of a body to the cold part.

Assertion and Reason based MCQ

10) Assertion (A): Woollen clothes keep the body warm in winter.

Reason (R): There is air trapped in between woollen fibres and air is a bad conductor of heat.

- i) Both A and R are true and R is the correct explanation of the assertion.
- ii) Both A and R are true but R is not the correct explanation of the assertion.
- iii) A is true but R is false.
- iv) A is false but R is true.

11. **Assertion (A):** All hot bodies radiate heat.

Reason (R): When heat falls on an object, a part of it is reflected, a part is absorbed and a part may be transmitted.

- i) Both A and R are true and R is the correct explanation of the assertion.
- ii) Both A and R are true but R is not the correct explanation of the assertion.
- iii) A is true but R is false.
- iv) A is false but R is true.

Match the columns

Column 1	Column 2
Mercury	Kink
Rubber	Liquid metal
Land breeze	Reflect heat
Clinical thermometer	insulator

Light colours

Night time
