

Ex. 1 Read and translate the text.

There are lots of environmental problems nowadays, mainly because of pollution. It is the contamination of air, water and land by waste, chemicals, smoke and other harmful substances.

The emission of smokes from factories and cars, are big causes of air pollution which produce acid rain, smog and a hole in the ozone layer.

Water is also suffering from pollution because of the millions of tons of litter being thrown into the seas every year.

Pollution is also caused by the fertilizers and pesticides used by farmers for the soil.

It is up to us to stop damaging the environment. We all should act green and fight the pollution by using the 3 R's!

Ex. 2

Match each word to its corresponding definition:

Words	Definitions
1 Acid rain	a. fog and smoke.
2 Ozone layer	b. rubbish and garbage.
3 Smog	c. rain that contains dangerous chemicals from factory gases.
4 Waste	d. a layer of gases that protects the earth from the harmful radiation of the sun.
