When the next customer was ready to pay for her fruit tea, she **p** takes took out her smartphone and **p** held hold it in front of a small machine on the counter. The machine **p** scan scanned her phone and made a beeping sound. The **p** paying payment went smoothly, and it took only seconds to **p** complete completed the process.

Among the many 9 benefits benefit of making payments with our phones, the major one is convenience. Wallets are usually big and **9** heavier heavy. Going out without them can a safe save us a lot of trouble. Besides, using e money means we don't need to worry if we **nade** have enough cash with us. For example, if we 9 forgot forget to bring our wallet to a restaurant, we wouldn't be 9 embarrassing embarrassed about having to borrow money from others. Also, if we run out of money, it wouldn't be p necessary necessarily for us to find an ATM. The only challenge is to remember not to spend more than we can afford affordable! However, it is a secure security that we really need to be aware of when we use e-money. If our phones were **9** stole stolen by thieves, they could **9** secretly secret use our identities and make us **pays** pay for things we didn't buy! Nevertheless, as lone as we are careful, this shouldn't be too much of a prisk lisk.
