**Food Production**

In the past, farm animals were able to live (NATURE) lives in what we would now term 'free-range' conditions. Such farming methods however, (were not able to supply the rapidly growing (POPULATE) of the world and the increasing demands on food (CONSUME) . In order to cope with this rising demand, factory farming methods were introduced along with the (DEVELOP) of genetically engineered (GROW ) hormones, which resulted in a massive increase in food production. However, these developments in the use of factory farming and drug (TREAT) have led to a widespread feeling that animals are being caused a lot of distress and that the quality of the food itself suffers as a consequence. Certainly, many people (AGREE) with the idea of keeping animals in one building for their entire (EXIST) and argue that more emphasis should be given to (ALTERNATE) farming methods.
