hold

While reading disabilities receive the most attention, writing can be equally difficult to overcome. These disabilities are known as dysgraphia. Dysgraphia can be related to the physical act of writing. These students often cannot hold a pencil correctly, and their posture may be tense while trying to write. This leads them to tire easily, causing fatigue that further inhibits progress. Dysgraphia can also refer to difficulty with written expression. With this type of disability, students have trouble organizing their thoughts coherently. Their writing may be redundant or have obvious omissions that affect the quality and readability of the text. Dysgraphia may also cause students to struggle with basic sentence structure and grammatical awareness.

GLOSSARY:

Receive - otrzymywać
