

What can we do in case of...

EARTHQUAKES?

Read the next tips. Some conditionals are not finished: some of them lack part of the **result**, and some of them lack part of the **condition**. Can you match them?

CONDITIONS:

If you are outside,
If you are inside a building,
If you get trapped under rubble,

RESULTS:

- cover your head and you neck with your arms.
- stay under it
- stay on it, and cover your head with a pillow.

If ...

never leave the building during an earthquake.
Reassure other people.

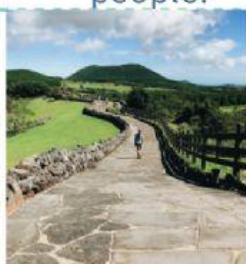

If you feel a second tremble,

.....
Drop on the ground. Look at the photo of the safety position.

If ...

don't move and cover your mouth and lungs with a cloth. Whistle if you can. Don't shout: if you do it, dust can go into your lungs.

If ...

don't enter buildings and don't stay around them. Help other people if they need it.

If you have a desk or a table near,

.....
Hold on!

If you are in bed,

.....
If there's a ceiling lamp over your bed, move to a safe place.
