

ÁREA Y PERÍMETRO DE FIGURAS CON TÉRMINOS MONOMIOS Y POLINOMIOS

EJEMPLO:

12x

Perímetro

$$\begin{aligned} P &= 4L \\ P &= 4(12x) \\ P &= 48x \end{aligned}$$

Área

$$\begin{aligned} A &= L \times L \\ A &= (12x)(12x) \\ A &= 144x^2 \end{aligned}$$

7x

Perímetro

$$\begin{aligned} P &= 3L \\ P &= 3(\quad) \\ P &= \end{aligned}$$

Área

$$\begin{aligned} A &= \frac{b \times h}{2} \\ A &= \frac{\quad \times \quad}{2} = \quad \\ A &= \end{aligned}$$

2x

4x+2

Perímetro

$$\begin{aligned} P &= b + b + h + h \\ P &= \quad + \quad + \quad + \quad \\ P &= \end{aligned}$$

Área

$$\begin{aligned} A &= b \times h \\ A &= (\quad)(\quad + \quad) \\ A &= \end{aligned}$$

5x

10x

Perímetro

$$\begin{aligned} P &= B + b + L + L \\ P &= \quad + \quad + \quad + \quad \\ P &= \end{aligned}$$

Área

$$\begin{aligned} A &= \frac{(B + b) \times h}{2} \\ A &= \frac{(\quad + \quad) \times \quad}{2} \\ A &= \frac{(\quad) \times \quad}{2} = \frac{\quad}{2} \\ A &= \end{aligned}$$
