III. R3 課文

It is clear that astronauts live very different lives from those of regular people. They live and work 400 kilometers 1. the Earth in nearly zero gravity.

2. this, they must make changes to their basic routines, especially when it comes to eating, exercising, and sleeping.

3., since everything floats in space, their eating utensils all contain magnets so that they don't float away. 4., condiments must also be in liquid form so they don't block air vents or damage computers. Next, since the human body weighs almost nothing in space, they need more exercise than regular people. Otherwise, their muscles, which are no longer required to support their bodies, will soon decrease 5.. Most astronauts will exercise for 6. two hours a day in order to avoid this problem. Lastly, when 7. time to sleep, their sleeping bags must also be fixed to the wall. If not, they might 8. themselves waking up in the bathroom! Moreover, they must sleep 9. a specific schedule and try to ignore the frequent sunrises and sunsets.

As you can see, astronauts face many challenges and need to make many sacrifices while they're up in space. 10. this, there's no doubt that they live very fulfilling lives and have unforgettable experiences.
