

A water Experiment

Fill in the blanks the name of the materials.

a spoon

salt

two glasses

two eggs

water

Instructions to make the experiment

Find the materials in the Kitchen

In a glass, add 4 spoons of salt

Mix the water with the salt

Put the eggs in the glasses

Pour water in the glasses

What Happen?

The egg in common water is placed to the bottom, because the density of water is less than the density of the egg. But, when you add salt in the water, the density increases and the egg float.
