## Pollutants of Pollution

### A. Read the autobiography below.

Hello, my name is Earth. I have been feeling unwell because of pollution. There are three types of pollution that have made me sick lately. They are air pollution, water pollution, and land pollution.

Air pollution happens when the air around me gets polluted by smoke from factories and vehicles.

Next, water pollution happens when the sources of water are polluted by fertilizers and detergents.

Lastly, land pollution happens when the land is filled with waste such as garbage and industrial waste.

So, can you please take care of me? You might not be able to stop the pollution but you can prevent it. Only then, other living things can also be taken care of.

### GLOSSARY

- polluted: contaminated
- pollutant: a substance that pollutes air, water, and land.
- waste: things that are thrown away.

Based on the autobiography, complete the mind map below with the pollutants for each type of pollution.
