

# Drag and Drop the correct word :-

## Designing and creating websites have many stages :-

- Set up a simple diagram on paper for the homepage and the site pages.

- Decide the data and information to be used in the webpage.

By selecting the background color. -  
 Select the places to add text files, images, videos and sound files.  
 -Create the hyperlinks connecting the pages.

Choose a title, select a web address, and decide the storage capacity on a server and publish on the internet.

This is done using a programming language and HTML codes:  
 Convert the design into webpage. Input the data and files. Create the hyperlinks.

This stage consists of important steps which are as follows:  
 Prepare the text which will be added to the page using a text editor program and save it in a folder.
