

## CLIMATE CHANGE

Climate change is one of the most (1) \_\_\_\_\_ things for our planet. Many politicians and scientists say it is the biggest (2) \_\_\_\_\_ we face. I read almost every day that climate change is (3) \_\_\_\_\_ the Earth forever. Many species of animal, fish, (4) \_\_\_\_\_, frog, etc. are dying. The ice caps in the Arctic and Antarctica are melting. Our (5) \_\_\_\_\_ is changing so places are getting warmer, or (6) \_\_\_\_\_, or are having more and stronger hurricanes. We all need (7) \_\_\_\_\_ our bit so that climate change does not destroy us. It's important to cut down on things that (8) \_\_\_\_\_ greenhouse gasses. These warm the (9) \_\_\_\_\_ and change the climate. Doing simple things like turning off lights and (10) \_\_\_\_\_ paper all help.
