

How many people are there on the planet?

Ideas to know: Listen and read the next paragraph

Could you say how many people, approximately, inhabit planet Earth? I'll give you a hint: we are six times more than in 1800 (then there were 1,000 million inhabitants) and more than double than in 1950 (there were 2,600 million people). In just fifty years the world population has reached a staggering more than 7.6 billion! And it is estimated that in 2050 we could reach more than 9,000 million ... Will we all fit?

According to the last texts answer the nexts questions:

In population, how many times are we more than in 1800?

four times

five times

six times

three times

Are we three times more than in 1950?

Yes, we are three times more

No, we are not three times more

What figure has the population reached in 50 years?

- seven thousand six hundred million people
- six thousand six hundred million people
- five thousand six hundred million people
- four thousand six hundred million people

What figure could we reach in 2050? (Choose the correct audio)

Write the number that you hear in each audio:

Read, listen and repeat the next sentences:

Will we all fit?

There were 2,600 million people

Then there were 1,000 million inhabitants

We are six times more than in 1800.

Vocabulary
