Hari, tgl :

Simaklah video berikut ini dengan seksama!

contoh :

$$\frac{1}{5} + \frac{2}{4} = \frac{(20:5) \times 1 + (20:4) \times 2}{20} = \frac{4 \times 1 + 5 \times 2}{20} = \frac{4 + 10}{20} = \frac{14}{20} = \frac{7}{10}$$

KPK 5 dan 4 = 20

Tentukan hasil penjumlahan pecahan dibawah ini sampai paling sederhana !

1  $\frac{1}{5} + \frac{1}{4} = \frac{(\square:\square) \times \square + (\square:\square) \times \square}{\square} = \frac{\square \times \square + \square \times \square}{\square} = \frac{\square + \square}{\square} = \frac{\square}{\square}$

KPK 5 dan 4 =

2  $\frac{2}{3} + \frac{1}{5} = \frac{(\square:\square) \times \square + (\square:\square) \times \square}{\square} = \frac{\square \times \square + \square \times \square}{\square} = \frac{\square + \square}{\square} = \frac{\square}{\square}$

KPK 3 dan 5 =

3  $\frac{2}{7} + \frac{1}{4} = \frac{(\square:\square) \times \square + (\square:\square) \times \square}{\square} = \frac{\square \times \square + \square \times \square}{\square} = \frac{\square + \square}{\square} = \frac{\square}{\square}$

KPK 7 dan 4 =

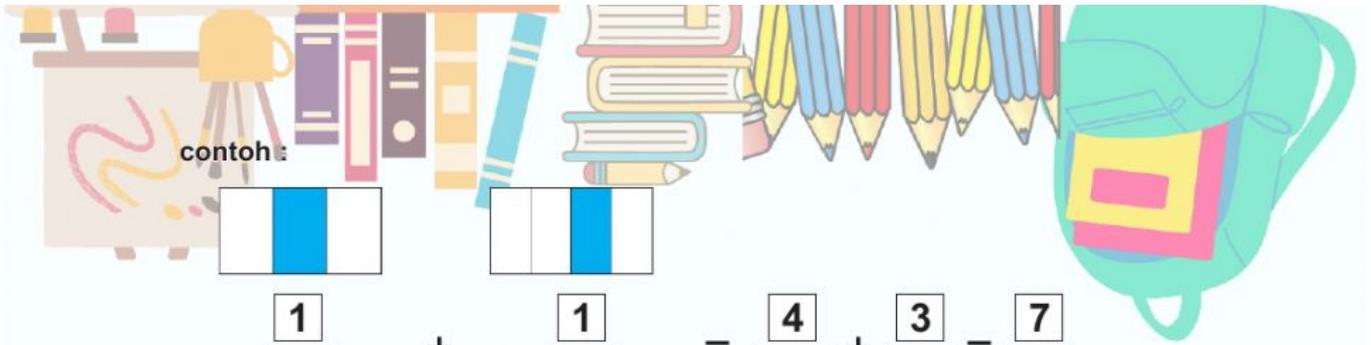

4  $\frac{1}{6} + \frac{3}{4} = \frac{(\square:\square) \times \square + (\square:\square) \times \square}{\square} = \frac{\square \times \square + \square \times \square}{\square} = \frac{\square + \square}{\square} = \frac{\square}{\square}$

KPK 6 dan 4 =

5  $\frac{4}{9} + \frac{1}{3} = \frac{(\square:\square) \times \square + (\square:\square) \times \square}{\square} = \frac{\square \times \square + \square \times \square}{\square} = \frac{\square + \square}{\square} = \frac{\square}{\square}$

KPK 9 dan 3 =

contoh:

$$\frac{1}{3} + \frac{1}{4} = \frac{4}{12} + \frac{3}{12} = \frac{7}{12}$$

Kerjakan soal dibawah ini sesuai dengan contoh diatas !!

1

$$\frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square}$$

2

3

$$\frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square}$$

4

$$\frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square} = \frac{\square}{\square}$$

5

$$\frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square} = \frac{\square}{\square}$$
