exact, locations on Earth. You determine the degrees that identify the latitude and longitude lines that cross closest to your location.

(Source: www.kl2reader.com)

	T	F
36. The equator is farther to the North Pole than the South Pole		
37. The equator is used to measure degrees of latitude.		
38. We must identify the latitude and longitude degrees to find an absolute location.		
39. The passage is about two main lines of longitude and latitude.		
40. The passage is about finding a good place to live on Earth.		

Read the following passage and choose the option (A, B, C or D) that best answers each of the questions below.

WHERE ON EARTH ARE YOU?

Another way to identify your exact location is to use lines of **latitude** and **longitude**. They are both imaginary lines that circle around Earth. Lines of latitude circle the Earth running east and west. Lines of longitude circle the Earth running north and south. Together, these lines form squares. It's like the lines you see on graph paper. If you look closely on most maps, you will see this graph paper printed on top of the map. If you look even closer, you will see numbers written by the lines.

These numbers help to give addresses to places on Earth. The address for each place is known as its **absolute location**
