

Reading

B1-09

Read the text and choose the correct question.

Lyft—a private driving service—is planning to have an all-driverless car fleet by 2020. If it achieves this goal, it may be one of the first companies to have driverless taxis. Lyft is working with General Motors, which is currently developing driverless cars. If driverless car technology is successful, taxi companies like Lyft will be able to reduce their operating costs significantly. Lyft will first test its vehicles in the United States. If customers use the service during the test period, they will be offered a choice of either a driverless car or a car with a human driver. However, for safety reasons, Lyft will have human drivers on board to take over if something goes wrong with the driverless vehicle.

1: Choose the correct sentence.
a) Lyft is not a taxi company.
b) General Motors is a company that is working on driverless cars.
c) Lyft will have a huge fleet of driverless cars by 2020.
