

What is inside a cell?

Instructions: match the name of the cell parts with its corresponding function.

Cell membrane

Cell's power producers.
Combine oxygen and food
to produce energy.

Vacuoles

Material between the cell
membrane and the
nucleus

Nucleus

Stick together the parts of
cell together. It allows
needed material to enter,
and certain other
materials to exit.

Mitochondria

Is full of chromosomes

Cytoplasm

Act like stomach, storing
and breaking down
materials
