is the same as 1,000 grams and a kilocalorie is 1,000 calories. Food calories are always measured as Calories but average people don't care much about the difference and just use the word calories.

Food is composed of proteins, fats and carbohydrates. Nutritionists know that a gram of protein contains 4 Calories, a gram of fat has 9 Calories, and a gram of carbohydrate has 4 Calories.

All food contain calories. When we eat something it provides energy for our bodies to use when we are active. We even need energy or calories while we are sleeping because, for example, our bodies are still breathing, our heart is pumping, and we continue to digest the food in our stomachs. If a person eats more food and more calories than is used up by activity, the body stores the excess calories in case it might need it later when food might not be available. So a person gains weight due to the extra food and calories. Similarly, if a person consumes fewer calories than are used every day over several weeks and is more active, that person will lose weight.

6. Calorie is a measure of _____ .
A. weight B. distance C. energy D. Volume
7. Animals that do not consume enough calories over a long time _____ .
A. can lose weight B. can starve
C. can maintain life D. can have a healthy life
8. Humans use calories when _____ .
A. running B. studying
C. sleeping D. A, B and C are correct
9. People gain weight from _____ .
A. eating more food and calories than they use up
B. eating fewer food and calories than they use up
C. eating a lot of fat food
D. eating a lot of food and calories when they are active
10. All the following statements are true EXCEPT _____ .
A. Eating foods that contains lots of fat cause a person to gain weight faster than eating protein
B. People normally pay less attention to the difference between “calorie” and “Calorie”
C. People who are more active, like playing sports or exercising, eat fewer calories
D. People still consume energy while they are sleeping.
