

## INFORMATION TRANSFER – PRACTICE 1

**PRACTICE 6**  
Study the notes below and use the information to complete the following text.

- dinosaurs lived millions of years ago
- there are 300 types of dinosaurs, new ones are discovered now and then
- some were huge, others were small
- some were fierce meat-eaters and gentle plant eaters
- reptile
- lived on land
- had dry, scaly skin
- laid eggs, had leathery shells
- first eggs found in Mongolia, in 1920's
- belonged to the Protoceratop species
- the Maiasaura species – known as the 'good mother lizards' because the mothers made nests for the eggs and looked after the babies

Based on the notes and picture given, complete the text below with the correct information.

Dinosaurs roamed the earth millions of years ago. There are many types of dinosaurs. Scientists have named about \_\_\_\_\_ (1) and new ones are discovered now and then. Some dinosaurs were huge in size while others were small. Some were fierce meat-eaters and others were \_\_\_\_\_ (2). Dinosaurs were reptiles. They lived on land and had dry scaly skin. Their eggs had leathery shells. The first dinosaur eggs were found in \_\_\_\_\_ (3) in the 1920s. They belonged to the Protoceratop species. Another type of dinosaur is the Maiasaura species. They were known as the \_\_\_\_\_ (4). They were named so because the mothers made nests \_\_\_\_\_ (5) and looked after the babies. Dinosaurs were able to swim if they wanted to cross the rivers but they did not live in water.
