Have you ever seen a small lizard in a garden? How about a giant lizard? In the rainy, island country of Indonesia, there (1) _____ between 4,000 and 5,000 giant lizards called Komodo dragons. They are called Komodo dragons because one of the five islands they live on is called Komodo Island. They are the largest species of lizard in the world. Adult Komodos can grow to (2) _____ than three meters long and weigh about 70 kilograms. The largest Komodo ever was an amazing 166 kilograms! European scientists (3) _____ them in 1910, and the first two Komodos were kept at the London Zoo in 1927. When Hollywood producers heard about the giant lizards, they made a movie in 1933 about a giant gorilla called 'King Kong'. The Komodos can live for about forty or even fifty years. They eat almost anything they can catch; for example, birds, bird eggs, monkeys, deer and horses. Sometimes they even eat other, smaller Komodos, and sometimes (but not often) even people. They especially like to eat dead and (4) _____ animals which they can smell many kilometers away. There are only about fifty Komodo dragons in zoos around the world, located mostly in Indonesia, Europe and North America. (5) _____ there are so few of them living in the wild, a park - called Komodo National Park - was opened in Indonesia in 1980 to protect them from hunters. Forty-five thousand people visited it in 2010.

Read the passage and choose the letter A, B, C, or D to indicate the correct answer to each question.

Amphibians are an animal group that includes frogs, toads, salamanders, and newts. These animals live in and out of the water. The number of amphibians on our planet is declining rapidly in both local mass extinction and population crashes. This is a cause for concern as many scientists believe that humans are responsible.

Since the 1980s, scientists have **noticed** a decline in amphibian populations. Although many animals are affected by humans, amphibians have been hit particularly hard. Some scientists believe this is because of their two-stage life cycle. Unlike most animals, amphibians live their lives in two distinct stages. The first is aquatic and the second is terrestrial. This means amphibians are sensitive to environmental changes in the water and on land. They also have permeable skin, which means that **toxins** and chemicals can easily get into their bodies.

6. Which title best summarizes the main idea of the passage?

7. In paragraph 2, the word "**noticed**" is closest in meaning to _____.

8. According the passage, which of the following is TRUE about amphibians?

9. In paragraph 2, the word "toxins" is closest in meaning to _____.
