

OPERACIONES CON FRACCIONES

1- Completa los cajones con los números convenientes para resolver las operaciones:

a. $\frac{3}{5} + \frac{1}{10} = \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

b. $\frac{7}{3} + \frac{5}{4} = \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

c. $\frac{7}{6} - \frac{1}{3} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$

d. $\frac{6}{9} - \frac{2}{4} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$

2. Resuelve las operaciones combinadas:

a. $\frac{3}{5} + \frac{1}{3} + \frac{2}{15} = \frac{\quad}{\quad} + \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

c. $\frac{7}{6} - \frac{1}{3} + \frac{4}{18} = \frac{\quad}{\quad} - \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

b. $\frac{7}{3} + \frac{5}{4} - \frac{1}{12} = \frac{\quad}{\quad} + \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$

d. $\frac{6}{9} - \frac{2}{4} + \frac{5}{6} = \frac{\quad}{\quad} - \frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$
