1. What is the next step to complete the procedure above?

2. What is the synonym of “ A placemat”?

3. What should we plug into the electricity socket?

How to Install a New Showerhead Easily

Tools and Materials:

1. Showerhead
2. Teflon tape
3. Adjustable pliers
4. Thick cloth

How to Install:

- Stop water supply by turning off the closest valve.

- Place a thick cloth under the shower area in order to prevent scratch on the floor in case incident happens such as the showerhead or the tool drop.
- Remove the old showerhead by turning it counterclockwise by hand. If you could not do it by hand, use adjustable pliers.
- Clean the thread from remaining Teflon tape and rust if any.
- Wrap the thread using new Teflon tape tightly in clockwise direction for about 3-4 rounds. You need to do it in clockwise direction to prevent the tape from undone when you install new showerhead.
- Install new showerhead on the thread by turning it clockwise by hand. Fix it using adjustable pliers to the right position.
- Turn on the valve to let the water flow.
- Check the showerhead from possibility of leak and check the running water.

1. What should we do to prevent scratches on the floor?

- a. Clean the thread from remaining Teflon tape
- b. Remove the old showerhead
- c. Place a thick cloth under the shower area
- d. Install new showerhead

2. Why do we have to wrap the thread using Teflon tape in a clockwise direction?

- a. To prevent scratch on the floor
- b. To let the water flow
- c. To check the running water.
- d. To prevent the tape from undone

3. "Remove the old showerhead by....". The underlined word means...

- a. Insert
- b. Take out
- c. Add
- d. Allow

4. Check the showerhead from possibility of ...

- a. Undone
- b. Rust
- c. Leak
- d. Showerhead
